Subject Index

- Acidity in wetlands, sources 53
 Analysis for lead, problems associated with 275
 Arsenic, exposure to determined by concentration in urine 1
 Arteriosclerotic disease, and blood organochlorine residue levels 135
 Atmospheric fallout of stable lead 77
 Atmospheric pollution, emissions from power plants 29
 Atmospheric removal processes 261
 Bioaccumulation of trace metals, indicated by concentrations in hair 107
 Cadmium in the marine environment 173
 Caesium-137, inventory in the Baltic Sea 247
 Calcium concentrations in hair 95
 Disposal of hazardous and toxic wastes 157
 Fly ash emissions, from power plants 29
 Fly ash, trace element content 13
 Halogenation of humic substances 185, 195
 Hazardous waste disposal, clay—aromatic interactions 157
 Heavy metals emissions, from power plants 29
 Humic substances, halogenation 185, 195
 Inorganic composition of dry and wet atmospheric deposition 261
 Lead analysis 275
 Lead-210, ingestion in diet 127
 Lead isotopes ratios, for determining level of anthropogenic pollution 61
 ———, for estimating atmospheric fallout of stable lead 77
 Magnesium concentrations in hair 95
 Mutagens, produced by halogenation of humic substances 195
 NO_x emissions, from power plants 29
 Organic acids, as a source of acidity in wetlands 53
 Organochlorine residues, association between levels in blood and arteriosclerotic disease 135
 Polonium-210, ingestion in diet 127
 Polycyclic aromatic hydrocarbons emissions, from power plants 29
 Potable water quality 207
 Radioactive elements emissions, from power plants 29
 Radionuclides, internal irradiation by ingestion 127
 ———, inventory in the Baltic Sea 247
 SO₂ emissions, from power plants 29
 Strontium concentrations in hair 95
 Strontium-90, inventory in the Baltic Sea 247
 Sulphates, as a source of acidity in wetlands 53
 Trace element mobilization, by human activities 13
 Trace elements, in human lung tissue 217, 231, 237
 Trace metals, hair concentrations as an indication of exposure to 95, 107
